

Alan George

Orange Park, Florida 32073
3213945451

alan.e.george@outlook.com

Dynamic Full-Stack Developer with extensive experience in building modern, scalable applications using TypeScript, Go, and C#. Proficient in leveraging web frameworks like React, Node.js, and AWS, while actively integrating AI-assisted development tools (such as Copilot and Claude) to accelerate the software lifecycle. Experienced in architecting secure, privacy-compliant solutions utilizing locally deployed LLMs. Proven track record in modernizing legacy systems and delivering cross-platform desktop solutions, supported by a solid foundation in leadership and problem-solving developed over 14 years of service as a Critical Care Flight Paramedic in the U.S. Army. Currently pursuing a master's degree to enhance technical skills and stay at the forefront of industry advancements.

Skills

- TypeScript expertise
- Proficient in Go programming
- Experience with C# development
- OOP proficiency
- Docker containerization
- PostgreSQL database management
- Proficient in React.js
- Node.js development
- RESTful API development
- End-to-end software development
- Git version control
- AI paired programming

Work History

Owner & Lead Developer

South Swell Software, Orange Park, FL

March 2026 - Current

- Founded and operated a web development company delivering full-stack solutions for clients, handling everything from architecture and development to deployment and client management.
- Build production web applications using React and Next.js on the frontend, and Node.js (NestJS/Express) & Go for the backend, with PostgreSQL for data persistence.
- Design and ship end-to-end systems spanning frontend UI, REST APIs, and database schema/management.
- Manage the full project lifecycle, from gathering client requirements to technical planning, implementation, and ongoing maintenance.
- Leveraged AI coding harnesses (OpenCode, Claude, Copilot) to accelerate full-stack development, utilizing online LLMs for complex problem-solving and locally deployed LLMs

for secure, offline code refactoring.

Full Stack Web Developer

SimX, Remote

July 2022 - January 2026

- Orchestrated the development of 4 robust APIs from scratch utilizing Typescript, Express, NestJS, and Node.JS, interfacing with both SQL and No-SQL databases; maintained 99.9% uptime and availability.
- Collaborated with front-end development team on end-to-end development of 3 Angular applications, implementing modular architecture, RESTful API integration, and responsive UI components while establishing coding standards and best practices
- Engineered data migration scripts and database backup automations handling over one hundred thousand records between databases securely with zero downtime, allowing seamless updates that increased database integrity when integrating legacy systems into modern architectures.
- Developed and deployed a cross-platform desktop application using Electron, NestJS, and React, delivering native-like performance and seamless offline functionality for enterprise users while maintaining consistent UI/UX across Windows, macOS, and Linux environments.
- Overhauled an existing Express.JS codebase for enhanced performance, improving software maintainability; triaged and resolved 15 critical production bugs, ensuring system stability for over 1000+ users.
- Pioneered the implementation of 30+ novel features, collaborating with product teams for future products, and accelerated the delivery of enhancements to bi-weekly sprints.
- Architected containerization strategy for 3 production web applications using Docker, deploying to AWS ECS with automated CI/CD pipelines through GitHub Actions; reduced deployment time by streamlining the release process and ensuring consistent environments across development and production.
- Championed automated testing strategy, generating 100+ unit test cases using Jest and Supertest; improved code coverage to 80% and diminished post-release defects by 25%.
- Designed multiple file storage solutions integrating AWS S3 with PostgreSQL databases for metadata management, enabling secure file upload, retrieval, and tracking across production web applications; streamlined asset management workflows and enhanced data integrity for thousands of stored files.

Full Stack Software Engineer

Trainsquare, Remote

January 2022 - July 2022

- Developed and implemented file storage solution, integrating AWS S3 with .NET and C# API, which reduced file access time by 30%.
- Engineered a RESTful API using .NET and C# to interact with SQL database tables, handling 100+ API requests per day.
- Designed and built UI components with React.JS and Bootstrap, increasing user engagement by 15%.
- Created dynamic user form and survey creation functionality using elements from multiple React.JS libraries to include Formik, Bootstrap, React Bootstrap, and Yup.
- Performed development, debugging, optimization and automation to support implementation of products and applications.

Critical Care Flight Paramedic

United States Army, Savannah, United States

April 2008 - January 2022

- Performed wide range of specialized functions and complex assessments, diagnoses, therapies and emergency treatment of patients transported by rotor-wing aircraft.
- Provided leadership, delegation and exceptional medical service in high-pressure situations.
- Provided emergency medical care and conducted physical exams and interviews to gain medical history and relevant health data.
- Maintained team flexibility and embraced change to adapt within dynamic environments.
- Treated 30+ patients being transported by air on average each month.
- Completed 200 continuing education courses each month to maintain relevant knowledge.

Education

Associate of Science in Computer Information Technology Expected in January 2027

Florida State College At Jacksonville, Jacksonville, FL

Certified Software Engineer in Software Engineering January 2022

Veterans Technology Education Courses (VET TEC), US Army, Remote
